location-based
marketing
service
for smartphones

salecort

what is Salecort?

Salecort is an innovative location-based marketing service for smartphones, usable indoors and outdoors, and easily customizable based on the user's demands.

It can display special offers and messages encouraging purchase on the mobile devices of potential customers based on their location.

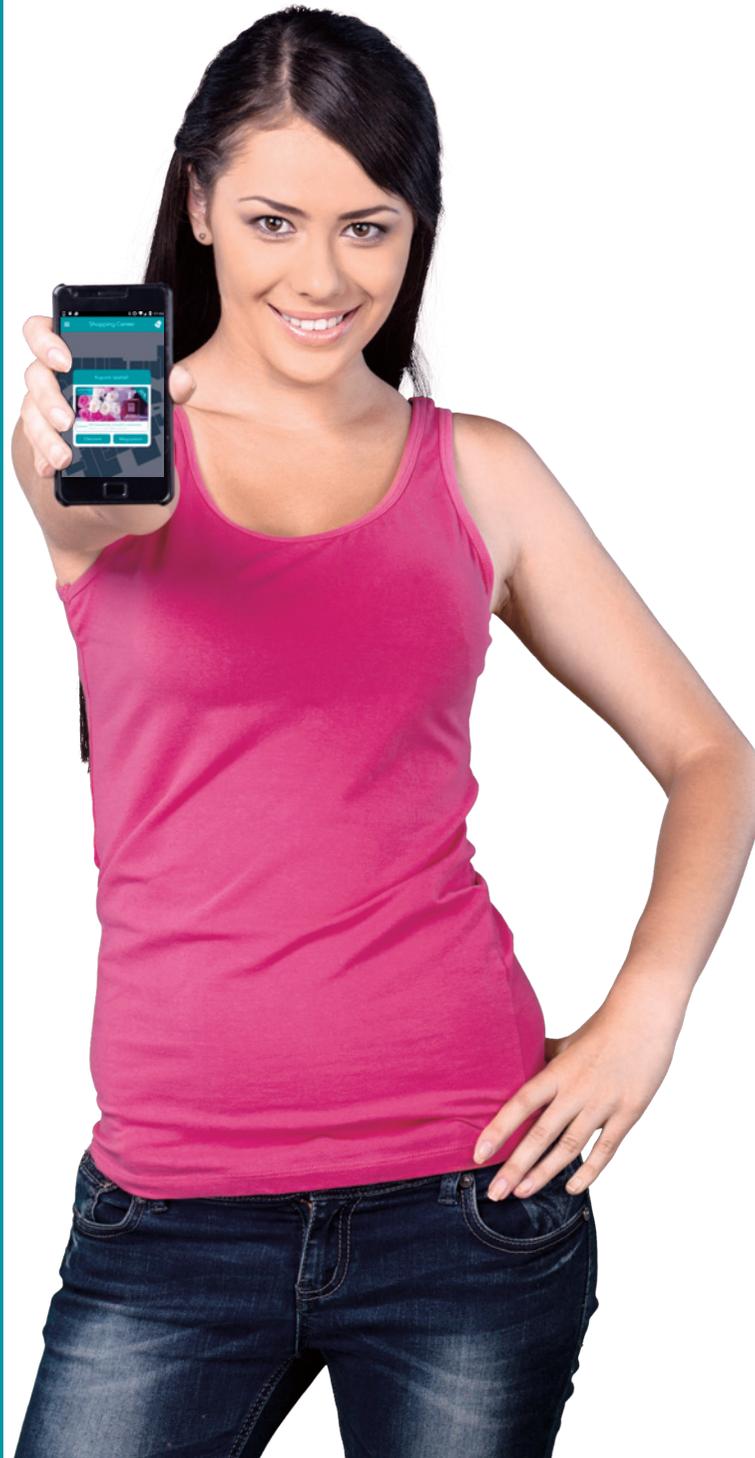

how does it work?

Salecort only requires the customizable mobile app (available for both iOS and Android systems) to be downloaded and small, battery-powered beacons installed for the campaigns.

**LOCATION-BASED OFFERS
OPEN NEW DIMENSIONS OF
ENCOURAGING PURCHASE**

To provide location-based marketing, we install Salecort beacons in the designated building or area (malls, shops, festivals).

Campaign-related offers and messages are then assigned to the beacons based on their location, which the app running on the customer's mobile device will automatically display when in close proximity to the beacons.

what do we offer?

The Salecort service is available in several different packages adapted to your specific marketing campaign. We give you our customized quotation after a free assessment of the site.

In case our services and prices meet your expectations, we will customize our application based on your demands, and make it available to customers in app stores. Our experts will also install and configure the beacons.

The all-around operation and maintenance is part of our service. Once the Salecort system goes online, you and your customers will be able to enjoy Salecort's benefits right away:

**REQUIRES NO INITIAL
INVESTMENT**
